Short Bio

Graduated with a Ph.D. in Agrochemistry from the University of Perpignan, C Roux carried out his research on plant fungal interactions and then on plant symbiotic fungi. Appointed Professor at the University of Toulouse, he contributed to the characterisation of strigolactones, a new family of phytohormones involved in plant-fungus interactions. He is currently studying the mechanisms of symbiotic efficiency by associating these fungi with soil bacteria, which is a crucial issue in agriculture because it will make it possible to optimise plant nutrition and health while reducing the use of inputs (more particularly synthetic phosphate and nitrogen fertilisers).
